Hesham Ali

Junior Software Engineer | Backend Focus | APIs, Webhooks, Integrations & Workflow Automation

الاسكندرية الاسكندرية مصر

موجز

I'm a Junior Software Engineer building a strong foundation in backend development, APIs, system integrations, and workflow automation. At Moraqmen, I contribute to business systems and client projects across CRM platforms, API-driven workflows, WhatsApp and Facebook integrations, WordPress solutions, and e-commerce stores. My current backend stack includes Node.js, Express.js, PostgreSQL, Redis, Docker, and GitHub Actions. One of my main projects is a custom CRM developed for Albasit. I helped plan and validate its business workflows, including user authentication, WhatsApp communication through a self-hosted Chatwoot setup, Facebook lead collection, lead-to-customer automation, reporting, and deployment across staging and production environments. I also built a consultation plugin for a WordPress Multisite platform with booking, manual payments, and a consultant dashboard, and contributed to pricing and analytics features in its matchmaking system. My Business Information Systems background helps me understand both the technical implementation and the business process behind a solution. I'm currently strengthening my backend engineering fundamentals, including database design, authentication, testing, networking, and system design. My long-term direction is Backend and Integration Engineering, with a focus on building reliable APIs, connected systems, and practical automation solutions.

الخبرة

Moraqmen

Junior Software Engineer

(#8##) ٢٠٢٦ - أغسطس ٢٠٢٦ شهور

القاهرة، مصر

- Work on client-facing software projects across CRM systems, API integrations, workflow automation, WordPress platforms, and e-commerce stores.

- Planned and validated the business workflows for a custom CRM built for Albasit, covering user onboarding, WhatsApp communication, Facebook lead collection, lead-to-customer automation, reporting, and analytics.
- Configured WhatsApp communication through a self-hosted Chatwoot setup and integrated Facebook Lead Ads using APIs and webhooks.
- Worked on the CRM backend and data layer using Node.js, Express.js, PostgreSQL, Redis queues, JWT authentication, and bcrypt, with AI-assisted development and functional testing.
- Containerized the system with Docker and configured GitHub Actions for automated deployment across staging and production environments.
- Tested customer import and paginated retrieval using more than 5,000 customer records.
- Built a custom consultation plugin for a WordPress Multisite platform, including booking, manual payment, and consultant dashboard features, and contributed to pricing plans and analytics features in its matchmaking system.
- Delivered Salla e-commerce stores from setup to launch, including store design, payment integrations, analytics tools, third-party applications, and custom-coded theme sections.
